Index selection strategy

Illumina sequencers use a green laser to sequence bases G/ T and a red laser to sequence bases A/ C. To ensure the success of sequencing, color balance in each sequencing cycle is required. Therefore, it is necessary to make sure that both green-laser bases and red-laser bases are included in each sequencing cycle when pooling multiple indexes. During sequencing, if the number of Indexes required in one lane is less than 24, there are multiple Index combinations. The recommended available combinations are as follow:

2 libraries: Index 1 and 2; Inex 25 and 26, Index 49 and 50.

3 libraries: Index 3 ,4 and 5; Index 27, 28 and 29; Inex51, 52 and 53.

4 libraries: Index 1, 2, 3 and 4； Index 27, 28, 29 and 30; Index 43, 44, 45 and 46.

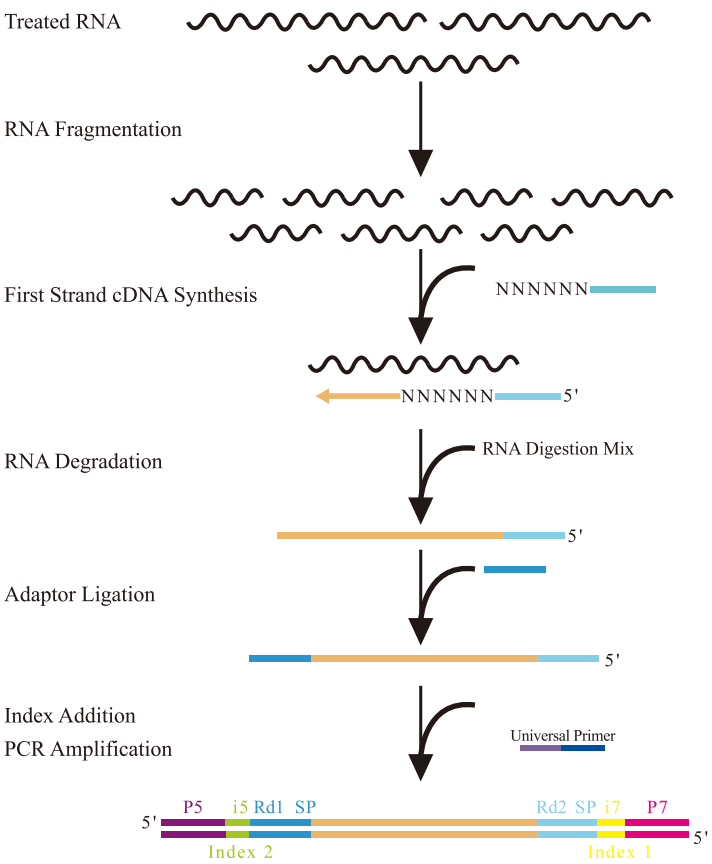
Workflow demonstrating the use of this kit with *Trans*NGS® Fast RNA-Seq Library Prep Kit for Illumina®



If this kit is used with *Trans*NGS® DNA Library Prep Kit for Illumina® or *Trans*NGS® Fast RNA-Seq Library Prep Kit for Illumina®, the resulting library has the following sequences:

5'-AATGATACGGCGACCACCGAGATCTACAC[i5]ACACTCTTTCCCTACACGACGCTCTTCCGATCT-XXXXXXXX

-AGATCGGAAGAGCACACGTCTGAACTCCAGTCAC[i7]ATCTCGTATGCCGTCTTCTGCTTG-3'

i5: Index 2, 8 bases;

i7: Index 1, 8 bases;

-XXXXXXXX-: inserted sequence.
