

GC Enhancer

Cat. No. AG101

Storage: at -18°C or below for two years

Description

GC enhancer should be used with DNA polymerase to optimize PCR from complex, GC-rich or AT-rich templates. The storage concentration is 10×. The working concentration can adjust between 0.5×-5×.

Application Range

Amplify DNA from complex, GC-rich or AT-rich templates.

For 50 µl PCR reaction system:

The amount of GC Enhancer (µl)	Final Concentration
2.5	0.5×
5	1×
10	2×
15	3×
20	4×
25	5×

For research use only, not for clinical diagnosis.
