

Certificate of Analysis

PRODUCT: *TransDetect*[®] PCR Mycoplasma Detection Kit

CAT. NO.
FM311

AMOUNT
2 boxes

LOT NUMBER
Q10228

SHELF LIFE
at -20 °C for two years

STORAGE CONDITIONS
at -20 °C for two years

SHIPPING CONDITIONS
Dry ice (-70 °C)

DESCRIPTION

TransDetect[®] PCR Mycoplasma Detection Kit is designed to detect the presence of mycoplasma contamination by PCR in biological materials, such as cell cultures or cell culture related materials. Highly specific primers have been designed to amplify a fragment of 16S rRNA coding DNA that is conserved across all commonly-known mycoplasma species. The kit includes an optimized supermix and primer, ultrapure water and positive control template. Using this kit, cell culture supernatants can be tested directly without DNA extraction. The kit provides a very easy to use, simple, fast (within 2 hours), specific and sensitive PCR-based mycoplasma detection method.

Certificate of Analysis

QUALITY CONTROL DATA

Assay	Standard	Result
Appearance	The liquid of each component should be clear without sediment or floc, and the color should not be significantly different from the control batch.	Meets standards
PCR Amplification	Using 4-6 kinds of cell culture fluids with different degrees of Mycoplasma contamination as templates, the test results of the products to be tested are consistent with the control batches;	Meets standards
	After the mycoplasma-positive samples are serially diluted, the detection sensitivity of the product to be tested is not lower than that of the control batch;	Meets standards
	Positive control templates were successfully amplified; negative samples were not amplified.	Meets standards

Notice to Purchaser

All products are for research use only. Caution: Not intended for human or animal diagnostic or therapeutic uses. If you have any further questions about this Certificate of Analysis, please contact us at +86-10-57815027 or +86-400-898-0321.
